

CONCEPT CLIMBING

VOLUMES

About.

At Concept Climbing we manufacture a range of Timber volumes. Our volumes have a high quality finish along with a great texture. With a range of shapes and sizes, there will be something to suit every route setter and wall.

Colors.

Choose from our range of colors, or let us know what you need. We can color match to your requirements.

How we measure our volumes.

The total space that they occupy. So they are measured at the widest, longest and tallest points.

Fixing.

All volumes come with screw inserts for fixing to the wall. We recommend the use of 8 gauge countersunk screws. Before use, ensure that all inserts have a screw in use!

Our volumes are finished with a high quality texture and color finish. We apply two layers of our texture to ensure a more durable surface and longer lasting texture than a traditional single texture layer.

This also results in volumes retaining their texture for a longer period of time.

As volumes get utilized more in everyday setting, they are also moved around much more.

To help ensure the longest life of our volumes, we use steel screw inserts on all of our volumes. This means you can screw our volumes down countless times.

Our Volumes are finished internally with a fiberglass tape along all the seams. This idea stolen from the boat building industry, results in a superior strength joint. It also keeps the weight down, and allows for easier volume stacking opposed to the traditional timber reinforcements.
